Summary

With over 10 years of experience in the software industry, I have worked in diverse settings, including public and private companies, startups, and organizations where software was not the primary business. This extensive tenure has allowed me to gain valuable insights into different business environments and has honed my adaptability to new challenges.

In recent years, my focus has been on enhancing developer productivity in my current company by creating tools that streamline workflows for software engineers, while also building the infrastructure that our platform relies on. By leveraging my understanding of software development processes and industry best practices, I have been able to develop enough tooling to optimize efficiency and drive results.

Furthermore, I possess a solid background in testing, which has enabled me to ensure the quality and reliability of software products throughout my career.

By combining my decade-long experience in the software industry, recent contributions to developer productivity, and strong expertise in testing, I bring a well-rounded skill set and a passion for driving innovation to any software development team.

Experience

Lead Software Engineer

MuleSoft

Mar 2019 - Present (4 years 4 months)

Responsibilities:

- Designed, developed, and maintained backend microservices written in Golang, JavaScript, and TypeScript
- Utilized Docker to containerize applications and scripts
- Created Helm charts to manage Kubernetes deployments
- Utilized Terraform to create AWS resources
- Participated in the hiring process by conducting interviews and evaluating candidates

Software Engineer In Test

Elementum

Oct 2017 - Mar 2019 (1 year 6 months)

Responsibilities:

- Performed exploratory testing for web applications
- Developed automated test suites using Protractor for Angular web applications
- Developed automated test suites using TestNG for Java backend services
- Developed automated test suites using JMeter and BlazeMeter for web applications

- Coordinated platform releases on a 2-week cycle with development teams
- Participated in the hiring process by conducting interviews and evaluating candidates

Quality Engineer

Gilbarco Veeder-Root Latin America

Jun 2013 - Oct 2017 (4 years 5 months)

Responsibilities:

- Performed various manual tests, including functional testing, regression testing, and user acceptance testing on Windows desktop applications
- Conducted root cause analysis of defects and quality issues, implementing corrective and preventive actions to prevent recurrence
- Created pipelines from scratch to execute automated test suites and perform regression testing on release candidates
- Developed a framework for executing automated test suites using Autolt and Python
- Participated in the hiring process by conducting interviews and evaluating candidates

QA Analyst

Ingematica S.A.

Jan 2012 - Jun 2013 (1 year 6 months)

Responsibilities:

- Defined and executed test plans for web applications
- Generated, tracked, and validated bugs
- Conducted meetings with customers to gather requirements for new developments

Education

Pontificia Universidad Católica Argentina 'Santa María de los Buenos Aires'

Engineer's degree, Computer Software Engineering

2008 - 2015
