

Sebastian Calle

Platform Engineering, Agentic Systems, Testing

sebacalle.com.ar | sebacalle@gmail.com | Argentina (Remote) | GitHub: [mulecalle](#)

Professional Summary

Principal Software Engineer with 15+ years of mastery in backend architecture, developer productivity, and hyperscale infrastructure. Currently driving the strategic pivot toward Agentic AI at Salesforce, specializing in the reliability and governance of Agentforce ecosystems. Proven track record of architecting CI/CD pipelines that accelerate deployment velocity by 40%+ and pioneering Agentic workflows across the SDLC. Expert in bridging the gap between legacy infrastructure and AI-first engineering to build scalable, resilient, and audit-ready agentic solutions.

Strategic Technical Expertise

- AI & Agentic Systems: Agentforce, MCP (Model Context Protocol), A2A (Agent-to-Agent), RAG (Retrieval-Augmented Generation), LangChain, Ragas (Evaluation Frameworks).
 - Infrastructure & Cloud: Kubernetes (K8s), Docker, Terraform (IaC), Helm, AWS Suite (Lambda, EKS, IAM), Buildpacks, Distributed Systems.
 - Languages & Backend: Golang, TypeScript, Python, Microservices Architecture, API Design (REST/GraphQL).
 - Quality & Productivity: CI/CD Orchestration (GitHub Actions, Jenkins), Performance Engineering (JMeter, BlazeMeter), Automated Testing (Cypress, Puppeteer).
-

Professional Experience

[Salesforce](#) - Principal Software Engineer

Jun 2024 – Present

- **Orchestrated** a CI/CD infrastructure for Agentforce Agents, accelerating AI adoption across T&P teams.
- **Governance & Standards:** Defined the "VibeCode" comprehensive rule set to govern and standardize the development process for **Agentforce** Agents.
- **Integration Architecture:** Developed a suite of **MCP** Servers to standardize and support the company's most critical third-party integrations.
- **Accelerated** internal AI adoption by the delivery of high-fidelity technical blueprints for Data Ingestion, Agent-to-Agent (A2A) communication, and automated RAG evaluation.
- **Led** executive-level strategic evaluations of tier-1 AI vendors (Google, Anthropic, OpenAI), aligning model selection with internal cost-per-token and latency optimization goals.
- **Stakeholder Feedback:** Established a direct feedback loop between internal stakeholders and Product teams through regular office hours to drive platform improvements.

[Mulesoft](#) - Principal Software Engineer

Mar 2019 – Jun 2024 (5 years 4 months)

- **CI Pipeline:** Created a unified CI pipeline to test, build, and publish artifacts, ensuring consistent and reliable software delivery across the entire company.
- **Developer Productivity:** Focused on creating internal tooling to streamline the entire SDLC for the engineering organization.
- **Microservices Architecture:** Designed, developed, and maintained scalable backend microservices using **Golang**, **JavaScript**, and **TypeScript**.
- **Infrastructure as Code:** Provisioned and managed AWS resources utilizing **Terraform**, ensuring reproducible infrastructure environments.
- **Container Orchestration:** Containerized applications using **Docker** and managed complex deployments on **Kubernetes** clusters via custom **Helm** charts.
- **Organization Player:** Provided dedicated, long-term engineering support to multiple infrastructure teams in the organization to accelerate the delivery of critical company-wide initiatives.

Elementum SCM - Software Engineer In Test

Oct 2017 – Mar 2019 (1 year 6 months)

- **Developed** comprehensive automated test suites using Protractor and TestNG, increasing code coverage from 20% to 85% for core supply chain modules.
- **Performance Engineering:** Executed performance and load testing strategies for web applications using **JMeter** and **BlazeMeter**.
- **Release Management:** Coordinated platform releases on a 2-week cycle, bridging the gap between development teams and production deployment.
- **Quality Assurance:** Performed exploratory testing for web applications to identify edge cases and usability issues.
- **Hiring:** Conducted interviews to evaluate candidates for technical roles.

Gilbarco Veeder-Root - Quality Engineer

Jun 2013 – Oct 2017 (4 years 5 months)

- **Automated** nightly regression testing workflows using Python, reducing manual testing cycles by 75% and accelerating release cycles for Windows desktop applications.
- **Process Improvement:** Conducted root cause analysis of defects, implementing corrective and preventive actions to reduce recurrence of quality issues.
- **Quality Assurance:** Performed functional, regression, and user acceptance testing (UAT) for critical software products.
- **Hiring Strategy:** Architected the interview process and evaluation criteria for technical roles, raising the bar for engineering talent acquisition.

Ingemática - Quality Analyst

Jan 2012 – Jun 2013 (1 year 6 months)

- **Quality Assurance:** Defined and executed rigorous test plans for web applications, ensuring high stability prior to release.
 - **Defect Lifecycle:** Managed the end-to-end defect lifecycle, including the identification, tracking, and validation of fixes.
 - **Client Collaboration:** Gathered and validated technical requirements directly from end customers.
-

Education

Engineer's degree, Computer Software Engineering

Pontificia Universidad Católica Argentina [\(UCA\)](#) | 2008 - 2015
